only à montréal™

mais non...

from a bestie to the amazingly
[neuro]diverse
dozen or so billion other besties,
collectively acknowledging their
mutual inclusion within and
throughout the all-encompassing
bestie omnisphere... now with more
shattering of the entire notion of all
and any national or other
communication barriers:
**a few required clarifications,
considering the need to properly,
doubtingly, slowly and surely
acknowledge the faith we all need
to collectively keep actually giving
a fuck**

firstly, in the form of a partial poetic
interpretation
**of one of everybody's very
favourite songs!**

laisse-moi t'y emmener
parce que j'm'en vais au
champ de fraises
rien n'est réel
pis ya rien de quoi s'inquiéter
champs de fraises à jamais

vivre est facile aux yeux fermés
mal comprenant tout ce qu'on voit
ça devient chiant d'être quelqu'un,
mais ça finit bien
come on. m'en crisse

honourable mention:
un musicien parmi tant d'autres

[give a fuck] right now...
i swear
actually, someday, i wish for you to ask me about a few relevant facts about our present ability to reach the closest coordinate imaginable by means of the great, commonly shared, and inventive thoughts still actively solving many problems of sir isaac newton, who was scared so shitless about such untimely madness being responded to with anti-heretic and hateful notions of a[n intellectual] challenge like my suspected very own, possibly tangential thinking, that he hid it in a drawer for much too long, to the theoretical CARNOT cycle maximum, by directly, highly efficiently, and ambiently capturing/containing/using (sup dyson ✊ real champ right there) as many carbon megatons as we may ever wish to conjure while we expand throughout our epic solar system and beyond of this wretchedly scorching excess solar radiation, by combining a few plant-based, CO2 capturing, humidity absorbing, and climate

change reversing production methods of nanotechnologies which each have many surprisingly essential as if intended physical properties by mathematically necessary probabilistic encouragement for goldilocks zone expansion of life in the universe for the coming seemingly so far overlooked physics loophole announcement

(silica aerogel, 3D printed glass mirrors: rice rusk ash; graphene, diamond: someone said hemp, but i've also priorly read maybe sugar cane; please confirm), using large enough stacked areas of highly insulated, suspended graphene nanoplatelets which can be switched on/off by being variably aligned using their diamagnetic properties in a fashion permitting an optimal angle of ambient light absorption, in a solvent with high heat capacity, touching the hot side of a nice big stirling engine to turn all that heat into motion powering a smaller stirling engine running in reverse, together leading to simple networks of an adequate proportion of highly insulated superheated and cryogenic containers of

synthesized diamond, to and from which efficient heat conduits, which can also be switched on/off, made from an adequate concentration of graphene nanoplatelets uniformly aligned via their diamagnetic properties in an otherwise already efficiently heat conducting solvent, transfer whatever cold or heat leading to those stable temperatures your little heart desires towards any work required by a given heat system, be it from prolonging or maintaining dual-stirling systemic inter-efficiency if required seasonally due to proximity to planetary rotational poles, hosing even them zombie wildfires, operating sufficient aquaponics farms for that free sushi i promised everyone all year long, feeling cozy, cleaning, bathing, cooking, freezing, pasteurization, distillation, desalination, autoclaves, whatever other chemistry i never learned, quantum computing, all the way to local as much as future phenomena of extraterrestrial transportation way way beyond even our milky galaxy, perhaps even near enough to

light speed using solar sails but that's for another time... or spewing heat back out as frickin' IR lasers (would this even help fusion research?) from your pet sharks' (read: alligators) ironically mirroring predatory minds...

shark see from daddy donny shark...

shark do. even shart. now we're even.🌈

ok chill out yo. tu pètes clairement ta coche là...
sorry not sorry: shit disturbing **absolutely** needed.

ESPECIALLY in science: tons of science journal redactions nowadays, eh?

i'd want to try doing all of this shit myself but i already dropped out of school 5 times. no thanks... PTSD

literally dropped out of electrotech that one most terrible year... 😞

thanks linda dydyk Ⓐ **inspirational**

you taught us all how orwell was a warning.
not a fucking manual

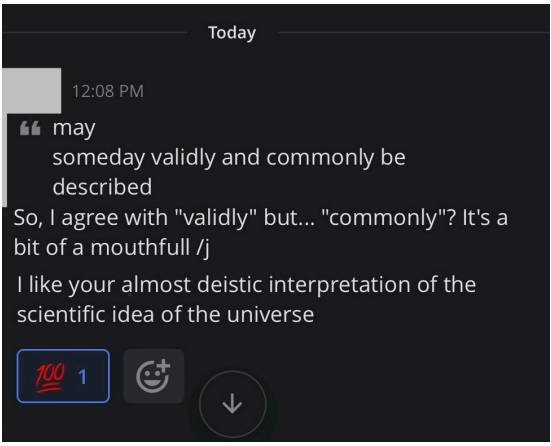
when i stop being stuck in this mania, i'd seriously love for all of us to just know how to do this... and just do it.

forevermore.

here: just a bit more self-deprecating humour and i think i'll be able to slow the mania down.

question and answer (a jazzy photo album)

or: a question of balance



I see dead people... [...] (whispered)

Is that a reference? 😂

Hell yeah love some audience a-capella

[redacted] 12:19 PM ↩ 1

I'm scared of the shit-eating grin

Damn, the roast is great

I love the term "zero-day prophets", especially cuz to someone who doesn't know what a zero-day is, it will sound like sorcery

😂 1 😀+

Great essays! I had a lot of fun reading them, tho I might have to read them again to fully understand, as predicted

💯 1 😀+

It's also fun to get to spam text the author while reading their work 😂

💫 1 😀+

[redacted] 1:33 PM

[redacted]

> have you not watched the 6th sense?!

have you not watched the 6th sense?!

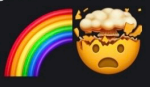
well look around for the oprah bees meme gif... much less scary than oprah

1:35 PM

like neil young sings... keep on rocking in the free world!

1:37 PM 8

btw... kendrick lamar is in fact drake's equal. "quit being haters and maybe i'll start appreciating your music a bit more"



Nope

Only one of them's a pedophile

But I'm not in it for the hate, I just enjoy the music

Whatever the reason, I like when there's real emotions behind it

2:08 PM

you may continue [illegible], but i personally prefer

2:08 PM

you may continue freely, but i personally prefer listening to songs like this one: https://www.youtube.com/watch?v=HsffxGyY4ck

2:24 PM

Porque no los dos

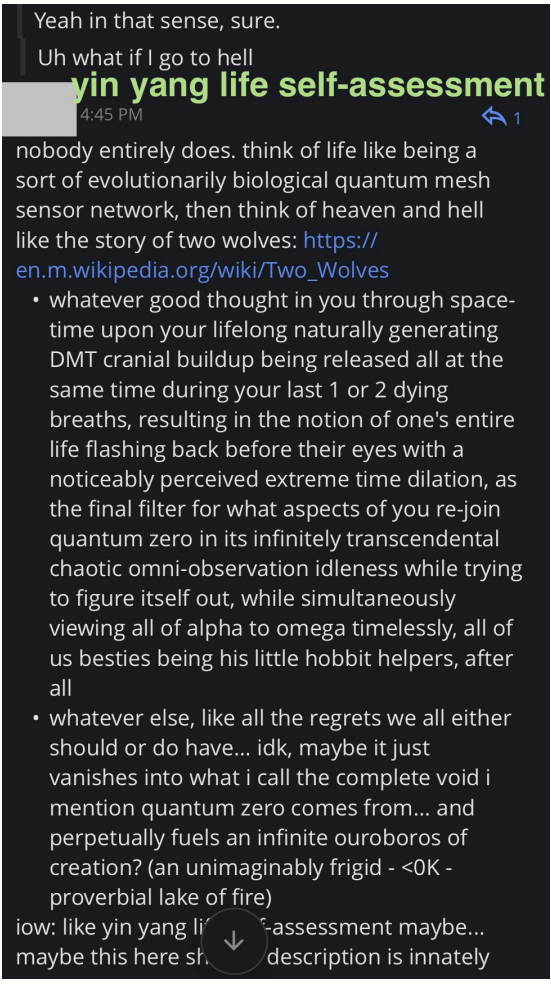
2:31 PM

i prefer feeling 100% inspired by music i choose to listen to, and there's so much music i can become OCD about it

> remember what i wrote after making fun of donny drumpf
>
> about equality
>
> see you in heaven! 🌈

3:44 PM

> Yeah in that sens e.



Yeah in that sense, sure.
Uh what if I go to hell
yin yang life self-assessment
4:45 PM
1
nobody entirely does. think of life like being a sort of evolutionarily biological quantum mesh sensor network, then think of heaven and hell like the story of two wolves: https://en.m.wikipedia.org/wiki/Two_Wolves
whatever good thought in you through space-time upon your lifelong naturally generating DMT cranial buildup being released all at the same time during your last 1 or 2 dying breaths, resulting in the notion of one's entire life flashing back before their eyes with a noticeably perceived extreme time dilation, as the final filter for what aspects of you re-join quantum zero in its infinitely transcendental chaotic omni-observation idleness while trying to figure itself out, while simultaneously viewing all of alpha to omega timelessly, all of us besties being his little hobbit helpers, after all
whatever else, like all the regrets we all either should or do have... idk, maybe it just vanishes into what i call the complete void i mention quantum zero comes from... and perpetually fuels an infinite ouroboros of creation? (an unimaginably frigid - <0K - proverbial lake of fire)
iow: like yin yang li -assessment maybe...
maybe this here sh description is innately

maybe this here shorter description is innately clearer (fuck yolo: think like yylsa)

think about trump: he fucks way too much shit up. but at least we can make epic laughter about him as a result xD

Two Wolves - Wikipedia

also... please share these relevant shit post clarifications with the great omni-besties. you're quite right: i didn't explain the joke well enough!

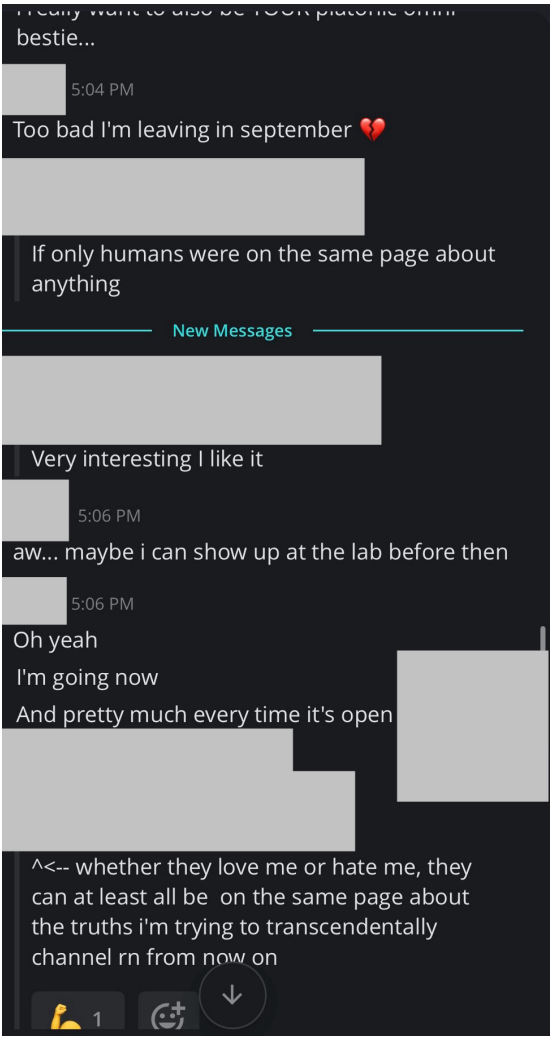
4:48 PM 4

i wish for all humans to finally understand that they, too, can and wish (genetically evolved by mathematically necessary design for creation to work this way) for universal living nirvana (like universal basic income but but cooler and insanely, even unimaginably more comprehensive)

omfg. ULN: unlike the UN, at last... a truly self-governing, individually sovereign, free thinking, preservationist collective of unique but sufficiently like-minded folks who get along by meaning no harm...

btw, thank you for your questioning.

i really want to also be YOUR platonic omni-bestie...



bestie...
5:04 PM
Too bad I'm leaving in september 💔
If only humans were on the same page about anything
New Messages
Very interesting I like it
5:06 PM
aw... maybe i can show up at the lab before then
5:06 PM
Oh yeah
I'm going now
And pretty much every time it's open
^<-- whether they love me or hate me, they can at least all be on the same page about the truths i'm trying to transcendentally channel rn from now on
1

like my favourite omni-bestie: quantum zero... iow: schrödinger's cat universally confirmed, except we all still get to think outside the proverbial box. both nothing and everything, just like yin yang... but really, really, free.

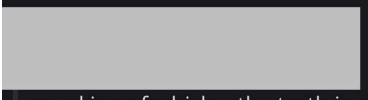
i hope my fun is also your fun. please try to slow me down before my smile-induced facial pain turns into an actual brain aneurysm... i.e. help me spread my present euphoric period of transformative glee unto all life's eternity.

what nice ways of turning the rest of all human life into lifelong praise art

life is prayer, after all

please leap this unto the great diamond receptacle storing human legacy so far

xD



> speaking of which... the truth is not only out there. it is also passing through you like neutrinos... and therefore also within.

> so like...yo: you can be this happy too.

5:18 PM

btw... re: the few grammar, spelling, and perhaps single regional à omission, and missing è, among perhaps other unnoticed mistakes... sent from my iphone™

please also note m[illegible]ed downgraded

please also note my stated downgraded communication skills from the solitude of the wretched snake known as the manosphere which i somehow succeeded evasion of by the grace of quantum zero... *Edited*

relevant information once wisely described to me by my mother: all in nature contains beauty, as well as imperfection: this is no mistake. as an ode to the perfect mathematical expression that is quantum zero, in the past, some knitters would intentionally leave at least one mistaken stitch in their works.

https://thefairythorn.ie/2024/01/26/knitting-crochet-superstitions/

The Fairythorn

Knitting and Crochet Superstitions - The Fairythorn

Are you a crafter who is also superstitious? Here are 9 interesting knitting and crochet superstitions that yarn crafters sometimes repeat.

what is this film? cube zero? i wanted
quantum zero.
please don't ever let life on earth end 👻

again, signed,
with 1.21 gigawatts of the purest ever love... ☀️
a bestie intellectually speeding well past 88mph.
feels somewhat ludicrous.
thoughts?

perhaps even instantaneous like i said last week.

breaking OG canon for more fun, but in some cultures, 8 is also a lucky number...
it might never end 🌈
NYAN

i'm afraid this is no longer a joke.
someone please
save the world.

aimons-nous, chers coquins!
